

Git setup protocol

Connecting to a git repo	git remote add origin
Checking the current directory	git remote -v
Setting a new directory	git remote set-url origin
Checking which branch we are in	git branch
Force changing the branch name to main	git branch -M main
Pushing to the branch	git push -u origin main
To pull from the repository if you pushed to another repository	git pull origin main --rebase
Create a new branch	git checkout -b bakery-algorithm
Go back to main	git checkout main
Merge your branch into main	git merge bakery-algorithm
branch itself on GitHub before merging	git push -u origin bakery-algorithm
